Broken Links: 1

Broken Images: 0

Console Errors: 0

Accessibility Issues: 18

Performance Score: N/A

SEO Score: N/A

Best Practices Score: N/A

TC_01 - Check for alt tags on images with missing descriptions.

Type: Accessibility

Priority: High

Severity: Critical

Steps: Navigate to GitHub's homepage. Locate and open the 'Profile Settings'. Check if all linked profile pictures have accompanying alt text, especially in areas like bio or project sections which contain image elements representing repositories/files/images etc.

Expected: All images should display a relevant description when tabbed into using screen readers. If an expected picture is not present the system message 'Image cannot be found' appears instead of rendering broken link icons for alt text absence

TC_02 - Verify if images load with alt tags missing.

Type: UI/Functional

Priority: High

Severity: Major

Steps: Navigate to a GitHub repository containing multiple pictures. Check each image for the presence of an alt text within its HTML element or using browser's inspect tool.

Expected: All images should have appropriate alternative texts displayed alongside them.

TC_03 - Check if title tag is concise.

Type: SEO/Performance

Priority: Medium

Severity: Minor

Steps: Open the source code of GitHub's homepage. Inspect and analyze length, relevancy and structure of meta description and title tags in HTML element within header section.

Expected: Title should be less than or equal to 60 characters without compromising on essential information.

TC_04 - Investigate broken links.

Type: Security/Functional

Priority: Low

Severity: Minor

Steps: Visit the link provided for 'marketplace'. Check if it returns a 400 bad request error. If this is confirmed, test its impact on users navigation within marketplace section and functionality of linked resources.

Expected: Marketplace page should redirect or display appropriate error message informing user

about the broken link instead of returning server errors like HTTP status code 403

TC_05 - Test for forms submission functionality.

Type: Functional/UI

Priority: Low

Severity: Minor

Steps: Find a form on GitHub's homepage. Submit the form with appropriate data and observe whether it submits correctly or returns errors based on incorrect/missing information input fields.

Expected: Form should successfully submit without any error, if user provides all mandatory inputs
